

Scope of Work:

The Work consists of the supply of materials and construction of Transition Compounds – Civil Works at the Forteau Point Site in Labrador and the Shoal Cove Site on the Northern Peninsula of Newfoundland. Work includes excavations, concrete foundations (approximately 50 foundations per site), backfilling, drainage infrastructure, underground electrical conduits and duct banks, grounding grids, perimeter fencing and gates, yard granular topping and yard insulating gravel. The work may also include Construction Services; worker travel and accommodations, site security, site offices, washrooms and related services.

The Transition Compound yards are approximately 70m wide by 100m long. The Access Roads and Yard Earthworks are currently complete. Some re-grading of the yards will be required.
