

# Muskrat Falls Generation Project Stakeholder Update

**OCTOBER 6, 2017**

At Nalcor Energy, we are committed to sharing information with people and communities in the areas where our people work and where we operate.

## **Water Levels**

The safety and health of people living and working in and around the Muskrat Falls facilities is our number one priority.

Work has been progressing on the installation of the safety boom in the river upstream of the spillway. With increasing electricity demand in the fall, the Churchill Falls hydroelectric plant is increasing electrical generation. To compensate for increased flow from the plant, we will need to make minor adjustments to water levels to maintain safe working conditions for those installing the boom.

The Government of Canada provides information to the public on water levels in various locations on the lower Churchill River. Here's a link to view the Churchill River Mid Pool Station (03OE015) which is slightly upstream of the Muskrat Falls reservoir:

[https://wateroffice.ec.gc.ca/report/real\\_time\\_e.html?stn=03OE015](https://wateroffice.ec.gc.ca/report/real_time_e.html?stn=03OE015)

For more information on the safety boom, review our information sheet at:
