

Nalcor Energy: Summary of COVID-19 Health & Safety Protocols (Muskrat Falls Site) Updated April 1, 2021

The safety of our workers, their families, our communities, and the public is of utmost importance to Nalcor and we are taking all responsible measures possible to protect the health and safety of our workers and the community.

Working closely with medical experts and NL Public Health, we have put stringent protocols in place to ensure the health and safety of workers and the community. We continue to update our worksite COVID-19 protocols to ensure our safety measures meet or exceed Public Health guidance.

We have prepared the following summary of the various protocols we currently have in place at the Muskrat Falls site.

Note: The information on testing and work rotations is specific to LCP NL workers. Workers from outside NL currently complete self-isolation for 14 days in St. John's.

1. Work Rotations:

- The standard rotation for LCP workers at the Muskrat Falls site is two weeks at site, then off for two weeks.
- While rotation changes typically occur every 2nd Saturday; to meet operational needs and changing work requirements, workers may be asked to travel to site on a different day to start their work rotation. For example travelling to site on Friday to start their shift on Saturday.

2. COVID-19 Testing:

- There are two mandatory COVID-19 tests and are completed at the following times:
 - Workers are tested about 72 hours prior to travelling to site and must receive a negative test result to be permitted to site.
 - Workers are re-tested within 3-5 days after arriving at the worksite.

3. Temperature and Screening Checks:

- Prior to travelling to site workers must complete a COVID-19 screening questionnaire. This gathers information about the individual's recent activities and potential contact with others who could be impacted by COVID-19.
- Before travelling to site every worker must have their temperature checked. Anyone with a temperature of 38 degrees Celsius or above will be denied access to the MF work site.
- While on site, every individual has their temperature checked daily.

4. Travel Protocols:

- For workers flying to Labrador, individuals must follow all NL Public Health and federal travel protocols. To meet operational needs and changing work requirements, workers may be required to travel to site on a commercial flight.
- While boarding, seated, and exiting from the planes and busses, individuals must wear a medical face mask.
- Physical distancing measures must be practiced on planes and busses.

5. On-site Protocols:

- The following are some of the safety rules in place at the MF site:
 - All workers must have a daily temperature check.
 - Masks are to be worn throughout the worksite and camp, except when in assigned camp room.
 - Enhanced cleaning and disinfection measures are in place in all locations.
 - 2m distance from others in all locations must be maintained (there are specific exemptions depending on the work task and in these cases other safety measures are in place).
 - Each worker has their own room and washroom/shower facilities.
 - Physical distancing in place – food line up, reduced seating at tables while eating, plastic barriers in place for servers, etc.
 - Enhanced measures in the dining hall - no buffet stations, utensils are wrapped, etc.

6. On-site Isolation Protocols:

- Isolation protocols are in place should someone at site develop COVID-19 like symptoms, and/or if an individual is contacted by Public Health as part of their contract tracing process.
- Individuals are immediately placed in isolation in a designated location at camp away from others. They are not allowed to have any contact with others until cleared to do so.
- Public Health is contacted and these individuals must remain in isolation until cleared by Public Health. Additional testing will be completed if that is the guidance provided by Public Health.
